MULTIDISCIPLINARY TO TRAIN NEW PROFESSIONALS IN THE PHARMACEUTICAL FIELD

Sapienza was the first Italian university to include in its courses' offer a **first cycle degree**, entirely in English, that will train professionals with competences in molecular biology, medicinal chemistry and computer science

ERASMUS FOR STUDY: RESIDUAL MOBILITY

Erasmus+ for study mobility grants not awarded in spring are made available again to interested students

WFME ACCREDITATION

The accreditation of the Italian agency ANVUR will make it possible for **Italian graduates in Medicine and Surgery** to enroll in medical specialty schools in the United States of America

SAPIENZA SPEAKS TO THE WORLD

The University Language Centre (CLA), one of the largest language centres in Italy, is a flagship of Sapienza. Our Faculty wants you to get to know it better because only together can we go (very) far!

In the heart of Rome's San Lorenzo district stands a building that has been renovated, recreated, rethought and transformed into a culture factory, and that in 26,000 square metres of laboratories, libraries study spaces, **recreates the world and unites it in a single essence**. The CLA represents the ultimate union of language skills translated into opportunities of foreign language learning. These opportunities are 'open to the world': to students, companies, individual scholars, foreigners, all united by the desire to achieve their goal of language knowledge, also as an expression of personal and professional growth.

High-profile international professionals converge in the CLA. The Collaborators Linguistic Experts (CEL) are always inclined to encourage foreign language learning at the highest level, for all students, also as a lifelong learning asset, for all use and for all, of languages (lifelong learning).

The CLA offers **courses at various levels** for

- the study of the Italian language by foreign students enrolled at Sapienza, but also by foreigners who, for study or work, need to learn Italian;
- preparation for the Cambridge ESOL and IELTS examinations, for which the CLA is an Authorised Centre
- preparation for the SIELE Spanish language examinations, for which the CLA is Authorised Centre.

Furthermore, **the CLA language tests** for checking and certifying language level have become a fundamental tool to guarantee Sapienza students access to international mobility, if not in possession of a recognised language certification. As of 2024, the CLA will make some test dates available also in Latina, Sapienza's second largest university pole after Rome.

Please visit the CLA page to find out more: <https://web.uniroma1.it/cla/>

Multidisciplinarity to train new professionals in the pharmaceutical field

The three-year degree program in **Molecular Biology, Pharmaceutical Chemistry and Computer Science for Pharmaceutical Applications** has been activated in the Sapienza campus of Latina by our Faculty starting from the academic year 2022-2023. It is entirely taught in English, and is the first and only one in Europe to present a solid interdisciplinary framework based on the three pillars of molecular biology, medicinal chemistry, and information technology. The main objective of the program is to train qualified professionals with a solid background in biomolecular, pharmaceutical and information technology scientific research that allows them to face the challenges posed by the growing needs of the universe of biologically active compounds (drugs, food supplements, nutraceuticals, and cosmeceuticals) and by the modern drug discovery process, from the so-called "small molecules" to the "new therapeutic modalities".

If you wish to know more about this degree program you can watch this short video: https://youtu.be/i_wZ4n4IW6I

Erasmus for study: residual mobility

Like every year, the Erasmus+ study mobility grants not awarded in the spring are made available again to interested students.

The **Pharmacy area** of the Faculty has issued an additional notice to assign the remaining locations. The tender was open from 17 May until 19 June 2024 at 2.00 pm. The provisional ranking was published on 26 June. Information is available at [this link](#).

The **Medicine area**, as usual and as clearly indicated in the call published on 19 January (with deadline 5 March 2024), allows students in the merit ranking to apply for the residual mobility (either because they were not assigned in April or because in the meantime returned by the assignees based on merit).

For this purpose, students have time until the end of August 2024 to present the required language certifications, where the level has not already been certified and reported in the merit ranking or concerns a language requested by a university for which there was no original qualification. candidates. At the beginning of September the Erasmus office responsible for the Medicine area will communicate the list of all remaining mobilities and will proceed with the reassignments.

All mobility assigned in this period can only be carried out in the **second semester of the academic year. 2024-2025**.

WFME Accreditation

Although the news has certainly already circulated, we are pleased to communicate to the **Medicine and Surgery students** of the Faculty that [ANVUR](#), the National Agency for the Evaluation of the University and Research system, following a process started in 2020, has been accredited by the World Federation of Medical Education ([WFME](#)) which has among its priorities the accreditation of medical courses in the world, as well as raising the standards of medical education.

ANVUR's accreditation by the WFME will last ten years and has global value. In particular, it will make it possible, starting from the date of accreditation, the enrollment of Italian graduates in Medicine and Surgery in medical specialty schools in the United States of America, on the basis of what is established by the Educational Commission for Foreign Medical Graduates (ECFMG), thus responding to the regulatory limitations in the USA.
